

Longley — QA / Regression Checklist

First job · 2026-06-21

Your first task, Mike. Go through every item, on a **phone AND a laptop**, and check the box when it passes. Found a problem? Don't fix it — **drop a note + screenshot in `MOCK_UP/quality_assurance/`** (Claude absorbs it). Check boxes by changing `- [ ]` to `- [x]`. The dashboard reads this file and shows Michael your % done. *He says he'll be up your ass — so let's make it fast and clean.* 😊

Live Campus: <https://michaellukasme-dot.github.io/amp-academy/>

A · Campus (the hub — the one icon)

- ☐ Campus loads at the URL above on a **laptop**
- ☐ Campus loads on a **phone**
- ☐ **Install** works: "Install Campus" / Add to Home Screen creates **ONE** icon called Amp Academy
- ☐ After install, **no duplicate course icons** appear (only the Campus icon)
- ☐ **Dark/Light toggle** (☾) flips the whole page and **remembers** your choice after reload
- ☐ ☐ **Guides** button (top bar) opens the Guides hub
- ☐ The **Enrollment** dropdown changes which courses show (IBEW / Perry / Tools / Owner)
- ☐ Each course's **Open** → button launches that course
- ☐ Turn on **Airplane mode**, reopen the installed Campus — it still loads (offline)

B · Guides hub

- ☐ Opens from the Campus ☐ **Guides** button
- ☐ **Student Guide** opens
- ☐ **Instructor Guide** opens
- ☐ **Admin / IT & Privacy Guide** opens
- ☐ **Install / Quick-Setup** opens
- ☐ **Overview** opens
- ☐ Dark/Light toggle works here too; "← Back to Campus" works

C · The courses (run this block for EACH course below)

For **each** course: Journeyman 2017 · 2020 · 2023 · 2026, Multimeter, Residential Estimating, Load Calculator, Electrical Code Coach (ECC): - ☐

Journeyman 2017 — opens · installs/offline · a lesson plays · quiz blocks completion until passed · **certificate issues on pass** · dark mode has **no white/broken panels** - ☐

Journeyman 2020 — same checks - ☐

Journeyman 2023 — same checks + **the English/Spanish (EN/ES) toggle works** (this was the pilot) - ☐

Journeyman 2026 — same checks - ☐

Multimeter — opens · offline · lessons + quiz + cert - ☐

Residential Estimating — opens · offline · the estimator calculator runs and totals correctly - ☐

Load Calculator — opens · offline · an Article 220 calc gives the **correct** result (spot-check one you know) - ☐

ECC — opens · offline · lessons/tests run · dark mode clean

D · The AI Tutor (inside a lesson)

- ☐ Tutor answers a normal question in plain English
- ☐ Ask it a code question — it **gives the NEC article** and does **not invent** a code value
- ☐ Switch a course to **Spanish** — tutor answers in clean Spanish, **keeps the NEC numbers**, defers NFPA 70 properly
- ☐ Ask something it can't know — it **honestly says so** (no making things up)

E · edex backend (certificate verify — public, no student data)

- ☐ Open the verify check (or run the smoke link Claude provides) with a made-up serial → returns **"not valid"** cleanly
- ☐ Confirm **no student name or personal data** is ever shown by the verifier

F · Cross-device & brand

- ☐ Everything above works on **iPhone** (Safari) and **Android** (Chrome) if you have both

- ☐ Everything works on **Mac** and **Windows** if you have both
- ☐ Brand looks consistent — **gold accent**, same fonts, clean spacing — across all apps
- ☐ Nothing claims accreditation / pass-rates / endorsements we don't have (**honest-state**)

G • Sign-off

- ☐ I went through every box above
- ☐ All issues are logged in `MOCK_UP/quality_assurance/`
- ☐ **Longley QA v1 — COMPLETE** ☐ (date: ____)

Report problems to `MOCK_UP/quality_assurance/` — short note + screenshot. Questions → Michael / Claude.
