

Mari Vega — Plan Review & Operating Recommendations

RevOps · 2026-06-21

Program & RevOps lead (Salesforce-school). I read the whole Amp Academy plan — business plan, proforma, MOU, the Perry & Holt offers, and the team lists. Here's how we turn a great plan into a machine that closes. Candor with care.

What's strong (keep doing)

- **Product is real and shipped** — that removes the #1 startup risk. We're selling, not promising.
- **The wedge (verified completion) is a true differentiator** and the institutional budget (~\$4,500/apprentice) is real.
- **Equity is milestone-earned with control protected** — clean incentives, no free-loaders. Good.
- **Two exits modeled (sale + Holt white-label)** — optionality is leverage.

The gaps I'd close before anyone "goes selling"

1. **No shared pipeline.** Three sellers (Reppy/Longley/Jimmy/Michael) + two motions (schools, IBEW) will lose deals in texts and memory. **Stand up one pipeline today** (stages below). *If it isn't in the pipeline with an owner and a next step, it doesn't exist.*
2. **No definition of "pilot."** A pilot must have a **start date**, a **cohort size**, a **success metric**, and an **end-of-pilot decision date** — or it drifts forever. Define it once (template below).
3. **Conversion path is fuzzy.** We know free → paid is the model; we haven't written the **trigger** (e.g., "at pilot day 30 with ≥70% completion, present the per-seat quote"). Automate the nudge.
4. **One CRM owner.** Someone owns data hygiene or the pipeline rots. Recommend **Longley** owns the board after QA.

Recommended operating system (lightweight, this week)

Pipeline stages (every school + IBEW target lives here): Identified → Contacted → Meeting set → Pilot agreed → Pilot live → Won (paid) → (Lost/Nurture) Each card: **owner** · **next step** · **next-step date** · **cohort size** · **\$ value**. No card without a next step.

Cadence: - **Weekly 30-min stand-up** (all sellers): each moves their cards one stage or says why not. Michael runs it. - **Monthly number:** pilots live, pilots → paid, ARR booked. That's the scoreboard.

Automation (cheap wins): - **Pilot onboarding checklist** auto-sent when a card hits "Pilot live." - **Day-30 conversion trigger** → quote + testimonial ask. - **Renewal trigger** at month 10 (tie to the CA-style year-2 renegotiation). - New school/IBEW signups flow into the pipeline automatically (form → row).

Enablement (so everyone sells the same): - One **one-page pitch + demo script** (the lines are already in the school/IBEW lists — formalize them). - One **pilot agreement template** (Esther/Ira light-touch) so we don't reinvent each time. - A **"first 5 minutes on a phone" demo** (install Campus → show verified completion → show Spanish).

Who's set up to succeed (and what each needs from me)

Person	Mission	What I'll wire for them
Longley	QA the product to launch-ready (his first task)	the QA checklist → dashboard widget (done); then he owns the pipeline board
Reppy	Land Customer #1 (BAVTS/LCTI)	the school target list + pilot template + day-30 conversion trigger
Michael + Jimmy	IBEW cohorts (Local 375 first)	the IBEW list + JATC pitch + commission tracking (MOST/LESS/LEAST)
Holt (if/when)	The world-introduction or the Holt Campus	a partner-launch program + co-marketing runbook
Perry	Consumer engine (vids/tests/code + promote)	coupon-code tracking + monthly payout report (his own mechanics)

My top 3 recommendations

1. **Stand up the pipeline + weekly stand-up before the first sales visit.** Cadence beats heroics.
2. **Write the pilot definition + agreement template now** — it's the bottleneck between "interested" and "paid."

3. **Instrument the funnel** (pilot → paid %, time-to-close, ARR) so we know what's working and can hand a clean dashboard to a buyer/acquirer at exit. *A measured business sells for a higher multiple — that's units off your exit count.*

Set up right, this is very winnable. The product's done; now it's a numbers-and-cadence game — my home court. — Mari
