

Electrician training that proves you learned it.

A family of free, installable, works-offline courses and tools — with a verified NEC load calculator and an AI tutor built never to fabricate code values. Designed and shipped with Claude in Cowork by a tradesman, for the trade. Ready for individual learners today; built to drop into a real institutional program.

WHAT'S BUILT

Campus — one home for every course, entitlement-aware

LIVE

Journeyman — NEC 2017 / 2020 / 2023 / 2026 editions, calc embed + honest tutor

LIVE

Mastering the Multimeter — 8 lessons, 3 labs, earned certificate

LIVE

Residential Estimating — quick-class + working estimator

LIVE

Electrical Code Coach — full NEC exam prep (Amp Academy × Perry)

LIVE

Load Calculator — Article 220, shows every step, cites the section

LIVE

edex backend — roster · entitlement · verified completion · gradebook (FERPA-first)

BUILT

Verifiable Video Lesson — checkpoints + gated completion (the IBEW wedge)

BUILT

Master / Lineman — authoring scaffolds (content pending SME)

IN AUTHORING

WHY IT'S DIFFERENT

Free, offline, private

Installs to any phone, tablet, or lab PC; runs with no signal; no logins, no ads, no student data collected by default. A genuine privacy posture, not a checkbox.

Verifiable completion

Completion is earned on a real assessment — and our video lessons require active-recall checkpoints. The opposite of "hit play and walk away." Recorded, for programs that must prove it.

An honest tutor

Answers cite the Code and defer to the printed NFPA 70. It will not invent a value — by design.

One consistent platform

Every course looks and works the same — learn the interface once, carry it into the next course. Adopt it as a standard, not a one-off.

FOR INSTITUTIONS (BASD · IBEW · JATC · EMPLOYERS)

The **edex** backend turns the free tools into a program you can run: enroll a rostered cohort, assign courses, and get **auditable, verifiable completion** — per student, per course, per cohort, instructor-led. Privacy-first and built to a FERPA standard. (Student-data features activate after legal sign-off.) Pilot-ready.

WHO'S BEHIND IT

Founder **Michael Lukas** previously authored an **NSF SBIR proposal** and built **quipuapps.com** — an entrepreneurship-education platform developed with input from **Dr. Alex Osterwalder**, creator of the Business Model Canvas. The evaluation-and-curriculum method behind Amp Academy isn't a first try; it's a decade-refined approach, now rebuilt for the trades with Claude in Cowork.

THE VENTURE

Amp Academy is its own partnership of three. It licenses the underlying technology (the verified calc engine, the tutor relay, the course platform, the edex backend) from LUKAS_APPS — the maker's house behind it.

Amp Academy — study aids; not a substitute for the printed NFPA 70 (NEC). No accreditation, pass-rate, or endorsement claims. A LUKAS_APPS venture. · Live Campus: michaellukasme-dot.github.io/amp-academy/
