

Amp Academy — The Perry Offer (his partner page, flipped)

Separate from the partnership · 2026-06-21

This is a **SEPARATE** instrument from the three-way partnership. Perry's Electrical Code Coach (ECC) is a **consumer co-brand** with its own economics and its own agreement (the ECC/Perry MOU). It is **not** part of the Repasch/Longley enterprise venture — keep the two clean. **Not legal/financial advice**; illustrative.

1 · Why Perry is the consumer engine (not the enterprise one)

The enterprise play sells **rostered cohorts** to VOTECHs and IBEW locals (the Business Plan). Perry is the other half: **the consumer funnel**. Electrical Code Coach already has **~93,000 YouTube subscribers** running the proven **free-content** → **paid-upsell** model (the same one Mike Holt built into ~\$10M/yr). Perry brings the **audience and the authority**; Amp Academy brings the **platform, the verified completion, and the tutor**. His audience is the top of our funnel — and the showcase that makes the enterprise calls warmer.

2 · The product & price

- ECC = Amp Academy × Perry, retail **\$99 one-time, all NEC editions** (or ~\$19.99/mo) — **deliberately matched to Perry's established \$89.99 lifetime / \$19.99-mo** so the co-brand never undercuts or confuses his audience.
- Perry's *own* affiliate program already pays **\$15 → \$25/sale (≈ 17–28%)**. We mirror that back to him — fairly.

3 · The offer — his own partner page, FLIPPED

Perry runs a **"Become a Partner — earn commission on every membership you sell"** page (electricalcodecoach.com/earn-money): a partner gets a **coupon code that saves buyers 10%**, earns **\$15/unit (up to \$25 at volume), 1099 over \$599**. **This is that page, flipped**. Perry becomes **Amp Academy's partner** — but instead of just selling, he does the work that keeps the app **true**, and earns an **escalating share**. Same familiar mechanics (coupon code, per-sale earning, monthly payout, 1099) — pointed back at him.

What Perry delivers (the work that earns it): ① **make the videos using the live app** · ② **check the tests** (confirm answers + NEC article refs, cut the dead ones) · ③ **sight the code** (verify every calculator against the NEC, edition by edition) · ④ **promote** to his audience with his coupon code.

Three offers — escalate deliverables for a bigger share (you hold #2 and #3 in your pocket):

Offer	Perry's share*	Deliverables
#1 LESS (lead with this)	~20% of net (≈ his own \$15–25/unit)	vids using the app · check tests · sight code · promote
#2 MORE (pocket)	~30% of net	SAME deliverables — just a better split if he pushes for more
#3 MOST (pocket)	50 / 50	MORE deliverables — exclusive push, full co-production, his whole audience

** Operations first: the first \$250/mo of net goes to Amp Academy to cover the platform (an ops cost — never billed to Perry, only ever out of revenue) — then the split. Rate locked at each sale; monthly payout; 1099 over \$599 — his own mechanics, mirrored.*

Also (point 1): the house **never sells NEC code books** (Perry's — that stays his). MVP: list **Perry's whole store on a single tab in The Dealer** so his catalog rides along, on the local payment rail (his own PayPal/Venmo — the house holds no money) per the Market Surface design. *That's a Dealer listing — different from this earn-share offer.*

4 · Unit economics (illustrative, per offer)

Assume ECC at **\$99** and the **\$250/mo AA ops return** recovered first. Per 100 sales/month (\$9,900 gross):

	#1 LESS (20%)	#2 MORE (30%)	#3 MOST (50/50)
Gross (100 × \$99)	\$9,900	\$9,900	\$9,900

	#1 LESS (20%)	#2 MORE (30%)	#3 MOST (50/50)
Less AA ops return	(\$250)	(\$250)	(\$250)
Net pool	\$9,650	\$9,650	\$9,650
Perry earns	\$1,930	\$2,895	\$4,825
Amp Academy keeps	\$7,720	\$6,755	\$4,825

Payment processing (~3%) and the tutor API (~\$0.50/buyer) are trivial against the margin. The escalation logic: **LESS keeps the most house margin for the core deliverables; MORE pays Perry better for the same work if he wants it; MOST is 50/50 but only for more deliverables** (exclusive push + full co-production). Open the offer that matches how much Perry will actually put in — and hold the other two in your pocket.

5 • How it feeds the enterprise play

Every consumer buyer is a **free top-of-funnel signal** and a **reference**. Perry's audience → consumer sales → brand authority → warmer enterprise calls (VOTECH/IBEW) → the high-value cohort contracts in the Business Plan. **Consumer is the mouth; enterprise is the meal**. Two instruments, one funnel.

6 • A bigger door (optional) — Perry equity

Beyond the revenue-share doors, the principal (Michael) would consider granting **Perry up to 3% equity in Amp Academy, over 3 years, fully milestone-driven** — recognition if Perry truly drives the consumer engine. This would be a **separate, contingent advisory grant** on the standard vesting (start month 1, 13-month cliff, forfeiture before, performance-gated) and is **funded from the principal's own share** so it doesn't dilute the founders. **Decision flagged:** giving Perry equity partially bridges the "keep Perry separate" line — counsel should confirm whether the door revenue-share and an advisory equity grant can coexist cleanly. (See the Business Plan, Strategic equity.)

7 • Status & the ask

- The three door deal-sheets are **drafted and ready** (Door #1 Perry-facing; #2/#3 in the back pocket).
- **Decision:** which door to open with Perry — confirm the \$99 ECC price + \$250/mo floor — and whether to extend the optional 3% milestone equity.
- Kept **separate** from the Repasch/Longley partnership by design (equity grant is the one bridge to confirm).
